About Us

James Ramsay was established in 1920 and has grown to become one of Scotland's most experienced and well respected specialists in industrial & commercial pipework, heating and process systems.

We offer our customers total support for their pipework, heating and process requirements from the provision of maintenance and emergency repairs to major pipework and heating plant installations and upgrades. We have a strong customer base including the following sectors: NHS, food and beverage, local authorities, industrial and manufacturing companies, facilities management and M&E contractors.

Our managers and engineers have decades of experience and a technical capability that is unrivalled. Our customers can rely on us to provide the highest level of service. We always respond and rise to a challenge.

Boiler and Heating Plant Installation

We have a long track record of heating and process system installation and upgrading. We can provide full turn-key packages including complete boiler house installations and modifications.

We have expertise in:

- Industrial & commercial atmospheric and forced draft boilers;
- Steam boilers
- Radiant heaters;
- Plate heat exchangers;
- Biomass boilers;
- Air Heaters;
- Water heaters;
- Gas, oil, & biomass fired systems;
- 100kW to multi-megawatt packages;
- Weishaupt and Nuway burners.

Pipework

We have an expert team of pipefitters and heating engineers with the capability to carry out pipework installations, repairs, upgrades and modifications including:

- Carbon steel, stainless steel, copper, plastic and exotic alloys
- Gas pipework and gas tightness testing on low and medium pressure installations including large volume systems;
- Steam pipework;
- Process pipework, including food & drink;
- Small bore to large bore industrial;
- Coded welders;
- NDT testing – MPI, ultra sonic – x ray – dye penetration;
- Pressure testing.

24/7

Our specialist service engineers are available 24/7

Upgrades

In addition to full installations, we have the expertise and specialist engineers required to undertake major upgrades to individual components of an existing system.

An example would be the replacement of calorifiers with new high efficiency plate heat exchangers. The cost of such upgrades is often paid back in a short time from fuel savings.

Steam Systems

We have decades of experience working with steam systems and our qualified steam specialist's offer the following services:

- Repair, supply, installation and re-tubing of steam boilers;
- Steam pipework installation, repairs and modification;
- Steam surveys. Full strip down inspections of steam boilers and systems are a statutory legal requirement. We are well known and respected by most of the major insurance companies and will also undertake recommended repairs, refurbishment and replacement of system components as instructed by the assessor.

We are one of Scotland's most experienced and well respected specialists in commercial & industrial, pipework, heating and process systems.

Combustion Controls and Servicing

Our gas service engineers and electricians are specialists in forced draft combustion burners and their control systems.

Typical projects include:

- Gas and oil burner replacement to the latest micro-processor controlled high efficiency firing equipment;
- Heating and process system improvements;
- Energy surveys and control upgrades;
- Burner and combustion controls servicing with full flue gas analysis.

Boiler Hire

We are able to offer gas and oil fired containerised boiler plant ranging from 100 Kw to 1000Kw.

A full installation service can be provided and we also have flexible hose and rigid pipework connections available for hire. We have our own transport fleet allowing us to respond quickly with emergency delivery and installation.

Service and Repair

Good maintenance is essential in order for your heating or process system to be kept operating efficiently and safely.

We offer planned preventive maintenance and servicing of gas and oil appliances from small commercial to large industrial blown gas and pressure jet applications. We offer maintenance contracts and will arrange service visits automatically when they are due. With our maintenance contract our specialist service engineers are available to you 24/7 providing a full breakdown and repair service.
